## High Yield, High Income CHAMPION CORNS

## **72MAY80**

## **72MAY80**

- In FAO 700 (CRM119 Grain, CRM118 Silage) maturation group.
- Number of maturation days is 105-110 days for Silage. \*
- Leaf structure is semi-vertical.
- Cob end filling is very good.
- Cob diameter is approximately 14-16 lines. \*
- The number of lines on the cob are 45-47 on average. \*
- Has very good staygreen at maturation stage.
- · Has good rapid drydown feature.
- Has good hectoliter.
- Planting interval is recommended as 14-15 cm above row\* 70cm between rows.
- Suitable to dual use for grain and silage planting.
- It has no soil selectivity.

## **ANIMAL FEEDING PROPERTIES**

- Silage corn variety with high yield and very high quality values.
- Due to high number of grains in cob, grain visibility is very high in silage.
- Crude protein content of silage in ideal conditions is around 9% and starch value is above 30% in timely harvest. \*
- Silage has high milk yield with high starch rate.

\* The performance of the variety may vary according to the climatic conditions, cultivation practices and soil types.
